RE: The New Yankee Stadium

Dear Mr. Shaw,

As we near the completion of the project, I feel it appropriate to reflect on Fireline's outstanding response to the diverse field conditions and fast pace nature of this project.

As previously stated, the project had many diverse transitions, and it was with great confidence that we could take our field measurements, send them to Fireline, and you would deliver a custom piece that fit to perfection. If these pieces had to be mitered and made in the field it would have taken a considerable amount of time to install. Furthermore, not only did it save us in time and labor, but in many locations, installation of stud framing and finishes were dependant upon the installation of the fire barrier, so it was imperative that the material was installed quickly and seamlessly as not to hold up the other trades.

Again, it is with great confidence and great appreciation that I say Fireline 520 responded speedily, both in production and technical support, to the extraordinary needs of this project. I can remember sending you measurements for a "hot location" early in the week and you and your team shipping it out that Friday! It was a pleasure working with you, Carin, and the rest of your staff. I look forward to working with you guys in the future!

Best Regards,
